■ **Removable terminals**
Convenient wiring and safety equipment.

The modular design fulfills the needs of system applications and equipment maintenance

Excellent Environment Adaptability

- ▶ Built-in DC choke to suppress harmonics*
- ▶ Built-in EMC filter to filter noise*
- ▶ Conformal coating (Class 3C3 of IEC60721-3-3 standard) ensures drive operation stability and safety in critical environments.
- ▶ The electronic components of the drive are isolated from the cooling system to reduce heat interference. Dissipated heat can be discharged by flange-mounting installation, and forced fan cooling can import cold air into the heat sink. The heat dissipation performance is optimized by these two cooling methods.

Wiring

Wiring Diagram for Frame A ~ C

*Input: 3-phase power

NOTE

It is not recommended to use a power capacitor or automatic power factor regulator (APFR) at the power input side. If the system requires such a device, please make sure a reactor is installed between the drive and the power capacitor or APFR.

Wiring Diagram for Frame G ~ H

*Input: 3-phase power

NOTE

It is not recommended to use a power capacitor or automatic power factor regulator (APFR) at the power input side. If the system requires such a device, please make sure a reactor is installed between the drive and the power capacitor or APFR.

Optional Accessories

C2000 Plus provides complete optional accessories to comply with the International safety regulations for overall solution performance.

Mains Electricity Input	Please refer to the rated power supply
No-fuse Switch / Fuse	There may be a large input current when the power is turned on. (Refer to the user manual 7-2 & 7-3 for details)
Electro-magnetic Contactor	Turn on/off the side electromagnetic contactor to run/stop the motor drive. (Refer to the user manual 7-2 for details)
AC Input Reactor	When the main power supply capacity is greater than 500 kVA, avoid excess current peaks damaging the motor drive to improve the power factor and reduce harmonics. (Refer to the user manual 7-4 for details)
EMC Filter	Reduces electromagnetic noise. (Refer to the user manual 7-6 for details)
Zero-phase Reactor	Reduces conducted and radiated interference. (Refer to the user manual 7-5 & 7-6 for details)
Braking Resistor/Braking Unit	Shortens the motor deceleration time. (Refer to the user manual 7-1 for details)
AC Output Reactor	Suppresses the abnormal dv/dt voltage peaks caused from the reflected waves of the long motor wiring. (Refer to the user manual 7-4 for details)
Sine Wave Filter	Filters cutoff frequency outputs from the motor drive to reduce motor noise or especially long wiring (> 1,000 m for oil wells, deep water pumps) (Refer to the user manual 7-4 for details)

* Please refer to the specifications of no-fuse switch, electromagnetic contactor, and the AC/DC reactor for 575V_{AC}/690V_{AC} for your purchase.

AC/DC Reactors, Sine Wave Filters & Braking Modules
